Year	2014			
Abstract	<p>Language is the vehicle and transparent means of communication that reflects the users needs, feelings and attitudes. Thus, language is a means to express, reveal and clarify things in reality. However, language, sometimes, may involve certain cases of ambiguity, which is a natural feature of human language. Basically, ambiguity happens when there is more than one interpretation for a phrase or a sentence, i.e., ambiguity increases the range of possible interpretations. Ambiguity may stem from different sources. Phrases or a sentences are ambiguous if their lexical, syntactic, and phonological aspects involve more than one interpretation. These interpretations lead, in return, to different results, e.g., bewilderment, confusion, misleading, misunderstanding, ironical or humorous situations. Language-based jokes find their humorous power through linguistic ambiguity. Some rely on similarities of sounds, some rely on polysemous word, Ambiguous syntax of the sentence. Replacing the idiomatic meaning to the literally meaning, or Transfer metaphorical meaning to the literal meaning. Possible to distinguish between potential ambiguity for real ambiguity: sentences that have ambiguity not intentionally (potential ambiguity), only using context to understand it, that is more that wider potential of ambiguity not materialize. In the humor texts, such as jokes, the ambiguity is intentional, therefore, its potential must be realized. In jokes, there are often a direct correlation between ambiguity and laughter.</p>
